

5-minute check

for controlling the frame insert with 2 motors,
2 motors plus and 4 motors

Power cable

1 Supplies electricity to your socket; are all the fuses switched on?

Warning:

The motor should not be connected to a switched socket!

2 Is the power cable in the socket and the control box connected?

3 Is the insert frame cable connected to the control box?

4 Is the base station (station for the remote control) cable connected to the control box?

5 Do all the cables appear to be damage-free?

Batteries

6 Are all the type AAA batteries correctly inserted in the control box? Are any dead?

Warning:

If the control system starts to beep when you take the remote control out of the base station, this is a warning that the batteries in the control box are about to run out.

7 Are all the type AAA batteries correctly inserted in the remote control? Are any dead?

Do not use rechargeable batteries!

Connecting the remote control to the control box

If, inspite of your checking the cables and the batteries, your insert frame with motor still fails to function, re-connect the remote control to the control box:

Press reset button of the base station once and release

Keep marked surface on the back of the base station pressed for 3 seconds

Save: Within 10 seconds press whatever button of the remote control

Customer services

If your insert frame with motor does not start to function after you have carried out this 5-minute check, please contact our Customer Services. Hüslér Nest AG, service@huesler-nest.ch or phone +41 (0)32 636 53 75.

Customer Services will need the following information: Dealer's name, date of purchase, invoice number, reference, item number, control box series number (on the bottom of the control box, starting with SN IQ...)
